DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed on 11/25/02 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because the documents submitted lack English translation. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609 ¶ C(1).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 24 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 24 recites the limitation "the at least two processing stage" in line 5. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 2, 11, 12, 19-41 are rejected under 35 U.S.C. 102(a) as being anticipated by Peter et al. (WO 01 76321).

As to claims 24-25, Peter et al. teach a device for classifying acoustic environment, comprising:

A feature extraction means; and

A classification means for classifying the environment based on the input signal (Fig.3).

With regards to claims 26-36, Peter et al. teach where the processing means are adapted to process the feature vectors in a first layer with a first set of HMM operating at a first time scale to determine a first classification, where the first classification is processed with a second set of HMM to generate a second classification output (Pg. 12, lines 23-32).

As to claims 37-38, Peter et al. teach a decision controller (Pg.12, lines 23-25).

As to claims 39-41, Peter et al. teach where the device for generating the class information of the environment is a hearing aid accessible by remote control (Pg.2, lines 1-4).

As to claims 1-2, Peter al. teach the method of classifying a acoustic environment using feature vectors extracted from an input signal and where the classifying means

Art Unit: 2655

are adapted to process the feature vectors in a first to determine a first classification, where the first classification is processed with a second set of HMM to generate a second classification output.

As to claims 11-12, post processing is common in signal processing and is inherent in peter, for ensuring the result.

As to claim 19, Peter al. teach where the classifier is HMM (Fig.3).

As to claims 21 and 23, the extracted feature in Peter al. represent auditory model.

As to claim 22, peter et al. teach where the hearing aid parameters are adjusted according to the result obtained by the classifier (abstract).

Allowable Subject Matter

Claims 3-10 and 13-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the claims are allowable, because, Peter et al. don't teach where a manner of processing in a processing stage is selected according to a class information obtained in another processing stage as recited in the claims.
